

Beacon — Non-Functional Pre-Launch Checklist

Launch prep that needs **no code** — App Store Connect listing, visual assets, and compliance/legal — plus the **Privacy Nutrition Label** to enter in App Store Connect → App Privacy. Hand this file to whoever owns the App Store submission; everything here can be done without an engineer.

App Review notes (the "how to test" text for Apple's reviewer) live in [MVP_RELEASE.md](#) §5.

A. App Store Connect listing (text metadata)

- ☐ App name: **"Beacon"** (confirm no trademark conflict in the App Store)
- ☐ Subtitle (≤30 chars), e.g. "Find Free Healthcare Near You"
- ☐ Description (long-form: what it does, who it helps, that it's free)
- ☐ Keywords (100 chars, comma-separated — e.g. free clinic, healthcare, low cost, uninsured, shelter)
- ☐ Primary category: **Medical** (secondary: Health & Fitness)
- ☐ Support URL (**required** — a reachable page or a [mailto:](#) support address)
- ☐ Marketing URL (optional)
- ☐ Copyright (e.g. "© 2026 Beacon Health")

B. Visual assets

- ☐ App icon **1024×1024 PNG, no alpha / no rounded corners** (export from [app_icon_final.jpg](#))
- ☐ Screenshots — **6.7"** (iPhone 15 Pro Max) + **6.5"**, ≥3 each: map view, facility detail, filters, Favorites
- ☐ App preview video (optional)

C. Compliance & legal

- ☐ Privacy **nutrition label** — enter the answers from the table below
 - ☐ **Privacy Policy URL** — live and reachable (already linked in-app via [LegalURLs](#))
 - ☐ **Terms of Service URL** — live and reachable
 - ☐ Age rating questionnaire (likely **4+**; answer the medical-info questions honestly)
 - ☐ Export compliance: uses encryption? **Yes → exempt** (standard HTTPS only)
 - ☐ Confirm **"Does not track"** — no ATT prompt needed
-

Privacy Nutrition Label

MVP includes auth (Apple), GPS (opt-in), crash reporting, and feedback submission. Enter this table in App Store Connect → App Privacy.

Data Type	Collected?	Details
Email Address	Yes — collected via Apple OAuth	Linked to user identity. Used for app functionality (account). Not used for tracking. Note: Apple "Hide My Email" may provide a relay address.
User ID	Yes — collected via Apple OAuth	Linked to user identity. Used for app functionality (favorites sync, feedback, settings). Not used for tracking.
Coarse Location	Yes — collected by Google Maps SDK	Third-party collection. Not linked to identity. Not used for tracking.
Precise Location	Yes — collected via GPS (opt-in)	Used for app functionality (finding nearby facilities). Not linked to identity. Not used for tracking.
Diagnostics (Crash Data)	Yes — collected via Sentry	Not linked to identity. Used for app functionality (crash reporting). Not used for tracking.
User Content (Feedback)	Yes — rating + text comment submitted by user	Linked to user identity. Used for app functionality. Not used for tracking.
All other categories	Not collected	

Tracking declaration: "This app does **not** track users." No ATT prompt needed.
